説明

For example:

Ｐｏｃｃｉｙａ(Russsia in Russian)

don't works :(

journals

Please don't assign issue to people without them telling you to do so.

Also, please state what you exactly you mean with "don't works".

Acronyms only work with one capital letter followed by some capital letters or numbers. By letter, we mean A to Z... So @Blah(de fi ni tion)@ will produce Blah(de fi ni tion).

In your example, are "Ｐｏｃｃｉｙａ" all capital letters in russian alphabet ?

Yes, for example:

en: RUSSIA(Country)

ru: ＰＯＣＣИＹ(Ｃｔｒａｎａ)

OK. It won't be easy to implement until we fully support Ruby 1.9, which comes with the right libraries to handle non-ASCII characters.

For the record, everything happens line 459 of @lib/redcloth3.rb@ (maybe we'll be on RedCloth4 when we support Ruby 1.9...). Regex with Unicode selectors like @"ＰＯＣＣИＹ".match(/\p{Lu}+$/)@ should work on Ruby 1.9+ (PCRE lib is too old on Ruby 1.8.x)

Hello. This is my version of solving problem.

1. Add trigger to wiki_pages table:

```
-- Trigger: alex_wiki_pages_tolower on wiki_pages

-- DROP TRIGGER alex_wiki_pages_tolower ON wiki_pages;
```

```
CREATE TRIGGER alex_wiki_pages_tolower
AFTER INSERT OR UPDATE
ON wiki_pages
FOR EACH ROW
EXECUTE PROCEDURE alex_wiki_pages_tolower();
```

2.add trigger function to redmine postgresql database:

```
--  Function:  alex_wiki_pages_tolower()

--  DROP  FUNCTION  alex_wiki_pages_tolower();

CREATE  OR  REPLACE  FUNCTION  alex_wiki_pages_tolower()
    RETURNS  trigger  AS
$BODY$
BEGIN
NEW.title=lower(NEW.title);
return  NEW;
END;
$BODY$
    LANGUAGE  plpgsql  VOLATILE
    COST  100;
ALTER  FUNCTION  alex_wiki_pages_tolower()  OWNER  TO  postgres;
```

So new pages will created in small leters, even if you taped in capital letters.

Not resolved in Redmine 2.6.10.stable
Will it be resolved in nowadays versions?
