I've noticed another missing textilization:

Under projects/list_documents page, documents are listed with
a preview of their descriptions. However, the descriptions are
not textilized. When the description is shown under the documents/show
page, it is correctly textilized.

journals

Here's another one... seems like there's no reason the news

summary shouldn't also be textilized. (patch included)

Just a bump on the issue. Plus is seems slightly related to issue #3740.

Changed subject only.

Warren Harris wrote:

Except that syntax highlighting isn't working in that specific case: see issue #3740.

I'll make a summary of several different changes regarding proposals to render content as being "textilized":

1. I'll start with the initial request: At the documents page (at http://host.domain.tld/projects/projectfoo/documents) documents are listed with a preview of their descriptions. However, the descriptions are not textilized. When the description is shown under the documents/show page (at http://host.domain.tld/documents/1), it is correctly textilized.

(patch; attachment:textilize-document-description_r3084.patch)

1. Lateron in the journal of this issue the textilisation of the news *summary* is also proposed and patched.

(patch; attachment:textilize-news-summary_r3084.patch)

1. I've now also merged issue #221 into this issue. It's basically a simple request to render the timelog-entry comments also textilized.

(patch; attachment:textilize-timelog-entry-comment_r3084.patch)

I've rebased all three patches against the latest trunk and attached them to this issue. I'll close/update issue #221 as being a (partial) duplicate of this issue (patch #221 does some more then what the issue's description says, which is only textilisation of the timelog-comment).

Can a Redmine Lead decide which of the patches will be implemented (in future) and decline the ones that aren't get integrated?

My personal proposal would be to only merge the patch for number 3. That one seems to provide the most useable UI-enhancement with a small change without any unwanted side-effects.
Number 2 seems to has a slight side-effect on the project-overview block and the news index view where trailing new-lines are added. Number 1 seems a good start considering related issue #3740 but therefor also seems to have a higher severity when integrating it in the current state of Redmine (before 0.9 feature freeze).

NB: With all these patches there exists a chance that the users enter comments with markup which /could/ make the UI break. It should be handled with care. This might also be a good reason to decline all off the three patches...

Text formatting on documents index added in r3602.

I'm attaching a improved (imho) version of Micha's third patch (the one that deals with time entry comments).

It 'textilizes' time entry comments *and* removes the length restriction. Also, the form text_fields to enter the time entries were replaced by text_areas's.

related with #8668 - missing WIki full textile for project overview

Terence Mill wrote:

> related with #8668 - missing WIki full textile for project overview

Not missing on present day.

News are textilized

time entry comment are not textilized

Ivan Cenov wrote:

I've updated #8668 accordingly. Thanks for mentioning it.

Ivan Cenov wrote:

> News are textilized

News items are indeed textilized, but not the news summary.

+1. This is very useful.

When is this likely to be fully accomplished?

+1

Textilization in the above mentioned areas would be helpful.

The attached patch adds textilization to spent time comments also.

Having textilization support for spent time comments is quite useful. Please let me know if tests are required for my patch.

The document and news already seems to have textilization support as it seems. Don't know since when though!

Can we also complete the last part as well?

Second oldest unresolved issue by now.
