説明

I would like to see 2 features added:

- In svn repository it should be possible to have a permalink that always points to latest version of a document.
- It would be nice to be able to link documents from repository and into the Documents part of redmine. This would make it easier maintaining the documents in a project.

/MartOn

journals

My mistake, I now see that the link always points to latest version. But I would like to be able to link documents from SVN to the Document folder.

/MartOn

Pretag this as a valid request, however this will have to come after the upcoming files/documents redesign. For clarification:

"meineerde: I think he want to have things like design docs in a svn repo and have some of it prominently linked in the docs section"

So, is it possible to use link source:some/file in Documents section ?

+1. Useful.

AFAIK this is supported.
