For files that take more time than allowed page timeout, could you provide a way to import files that are uploaded locally on the host hosting redmine?

Like a 500MB file would be uploaded by ftp in /redmine/whatever and you would go into the project files page, click import, specify the host directory and redmine would process the file just as it would if it had been uploaded with the webpage.

Thanks.

journals

+100 :o)

Concur --- my need is similar. I already have a USB drive attached that has quite a few ISO disk images that are 4GB each. I'd love to be able to leave them there and somehow link them in... Under version 0.9, I've also found that it fails to upload such large files

+1000 yes this is really useful, please add this feature.
