説明			
<p>For a deployment or user with only one project, I would like the user to be taken straight to the project page when he logs in. The Projects menu item at the top should be unavailable (a new project can still be created in the Administration interface). The Latest Projects widget on the Home page should be replaced, possibly with a Latest Issues widget.</p> <p>Currently I have one Redmine deployment with many projects, one of which is the only project available to some users, and another deployment with only one project involved. These changes would enhance workflow and the overall experience in both situations.</p>			
<p>journals</p> <p>Any news related to this feature?</p> <p>Has it been addressed elsewhere?</p> <p>It'd be great to replace the Latest Projects widget with the Latest Issues pertaining to that user's projects.</p> <p>Thanks,</p> <p>Lee</p> <p>There exists various plugins for that. Examples are:</p> <ul style="list-style-type: none"> • http://github.com/ericpaulbishop/redmine_single_project • http://github.com/jkassemi/single-project-forward <p>These should make this issue obsolete.</p>
