説明

It would be great if you could set a parameter that would re-assign bugs back to their author upon the status being changed to resolved or feedback.

journals

I vote for this feature. It's really useful.

Hi,

this seems to be useful. Maybe it could be implemented with this proposal?

#3517#note-5

Vote for this feature. This is one thing what I'm missing from trac. As well automatically set Done to 100% when closed.

This would be super useful

I am also missing this feature.

Nobody out there is missing it for over 6 years now?

It is main reason, that migration from Bugzilla to Redmine is very difficult.
Bugzilla chooses person field (@Author@, @Assigned to@ or @QA@) using current status.
For example,

a) if issue is "ASSIGNED" then only @Assigned to@ person has this issue on dashboard.

b) if issue is "RESOLVED" then issue is on @Author@ dashboard, and @Assigned to@ field is with original value. Then user (@Author@) can @Close@ issue or @Reopen@.

@Author@ and @Assigned to@ field should be constant during simple issue life cycle.
