説明

It would be very useful to be able to have the ability to track changes to a description over time, much like a wiki. Currently, to get around this limitation, we have been tracking changes by adding notes. This is important because we may want to update a description to more closely match our understanding of a problem, but we would still like to keep what a bug reporter or feature requester originally said in case there is a mixup.

journals

+1

+1

To me it's very major feature, implemented brilliantly in "Trac":
<http://code.whytheluckystiff.net/markaby/ticket/47?action=diff&version=4> not a long ago.

Description change even doesn't go to change history, but that's another story (with an easy hack-around): #328

Patch created closing this issue, #1717

+1

@Artem: should this issue be closed? (Has the patch been accepted?)

Closing this issue in favor of #746.

Sorry, I had entered the relation the wrong way round.

fwiw, +1 :D

+1 it would be a nice feature to have.

I wrote new plugin for this feature.

You can try to use this plugin: https://github.com/freedayko/redmine_issue_history

I've did some quick testing and it seems like you've integrated the functionality of the patches provided for issue #1717 smoothly and nicely.

Thanks for your contribution.

-Just to let you know: I think I found an issue and filed it at https://github.com/freedayko/redmine_issue_history/issues/#issue/1-
-> Issue has been fixed by plugin author.

I think this should be part of the Redmine core, but for now we will try the plugin.

Feature added in r4954. Description changes are now saved and diffs can be viewed from the issue history.

The implementation makes use of the existing issue history models which makes it radically different from the proposed plugin.

Is the plugin by Aleksander Palyan compatible with the upcoming 1.2.x release? If not is there a simple way to migrate from the plugin when 1.2.x is released?

Thanks everyone for your work on this, it's a very handy feature!

Please ask the plugin author.

Great to see. Thanks for taking the time to implement this, Jean-Philippe Lang.
