Would it be possible to see feature that would allow you to search issues with a keyword from all projects. Now the search is limited to search from one project at the time, this is of course very useful and would like to keep this option too, but sometimes there has been need to search issue from all projects.

journals

You can use the following URL to get to all the issues across all projects:

http:////issues

This might help you.

Indeed that was quite nice link, thank you :)

Still would really like to see a feature to search all these issues with a keyword, but with this link one could try and index the list with external search engine.

Patched in #821.

As of r1435, you can now search all projects or the projects you belong to using the search engine.
