説明

Submitting an invalid project id to a search results in a NoMethodError from a nil object.

You have a nil object when you didn't expect it!
The error occurred while evaluating nil.active?

```
app/controllers/application.rb:105:in `check_project_privacy'  
app/controllers/search_controller.rb:41:in `index'
```

This patch checks whether the project exists first, and a 404 page is displayed instead. Test included.

journals

Applies cleanly to r1212.

Patch applied with slight changes in r1237 (used a before_filter instead).

Thanks
