Is possible to use minutes like 0.30 -> 30 Minutes and not 0.50 -> 30 Minutes.

journals

What might be a nice alternative is to have time entry with a units value too.

So, for one hour you would enter: 1h (or "1 h" or "1 hour" or whatever)

For thirty minutes: 30m

This would remove the ambiguity of having to use .5 for 30 min.

I vote for:

- 1.5 = 1 hour and 30 minutes
- 1h30m = 1 hour and 30 minutes

I think it was same in Trac, someone can look up ;)

I also propose:

* 1:30 = 1 hour and 30 minutes

But as Maxim said, *0.50 hours = 30 min*, not 50 min.

You can now use 1:30 for example the remove the ambiguity. See r1320.

What about to put exact description into Wiki? It should be handy for everyone! I'm just writing description for our team ;)
