説明

The below patches the wiki include macro to be able to include pages from any project.

Where I used this is I wanted my home page to include text from a wiki page, rather than text under Administrator welcome message. To do this, I simply made the below patch and set the welcome message to `{{include(Home,myBaseProjectName)}}`

journals

Good idea. Just a few comments:

- I think we could use the following syntax in order to be consistent with wiki links: `@{{include(myBaseProjectName:Home)}}@`

*** Permission to view the included wiki page should be checked (the target projet may be private)**

The previous changes are committed in r1350.
