IMHO it could be great to differentiate saved queries:

- global vs project's local
- public vs private

This can be solved by adding icons, or maybe better:

- group queries into wo groups: global and project's local, put divide between these groups (horizontal rule)
- add icons for public/private - maybe one icon only for public or private will be ok.

Logic can be also switched, so it can be grouped by Private/Pulic and flagged by icons per global/local.

journals

seems to be related to #2002.

r4908 splits public and private queries into 2 sections in the sidebar.
