説明

Currently Trac allows you to use slashes to notate a hierarchy for the wiki pages. It would be nice is RedMine would also support the same concept.

Example.

SomePage/SomeSubPage1

SomePage/SubPage2/SubSubPage1

SomePage/SomeSubPage3

Trac also allows for directory style links. Examples [../](#) Will bring you up a level [./SubPage2](#) is a shorthand for the subpage so you don't have to link to [SomePage/SubPage2](#) for example.

journals

This would be a very useful feature for adding some intuitive hierarchy to wiki pages.

Are there any plans to implement it in the foreseeable future?

+1

This could also make the "Parent page" field unnecessary as you can generate the breadcrumbs from he URL

This would be really nice ...

+1

+1

+1 if this means pages can have the same name under different parents.

In Gitlab the wiki was initially flat, then they added support for slashes in wiki slugs.
Maybe the config/routes.rb from Gitlab will help moving this issue forward.
