説明

Redmine revision 1438.

When I go to project repository -> Revision #xxx, I see changed/added/deleted file list. If file is changed, there are "View differences" link in the right. I click on the link and got an error.

Annalise redmine logfile I find that error message:

```
Fragment read: repositories/diff/41/e78d09cdd7ef569bf289310035e7eeb6 (0.00043)
```

```
Shelling out: svn diff -r 617:618 'http://svn.elgama.lt/svn/saugykla/software/sharaga/software/sharaga/trunk/src/RemSkaitikliai/RemSkSiuntos.Designer.cs'@618 --username 'xxx' --password 'xxx'
```

But repository URL must be:

```
http://svn.elgama.lt/svn/saugykla/software/sharaga/trunk/src/RemSkaitikliai/RemSkSiuntos.Designer.cs
```

without duplicated software/sharaga/ in a URL.

Something wrong in URL generation algorithm

But if I click on "View differences" to view differences all of files, then all OK, Differences displayed correctly.

Thanks.

journals

I found that error occurs if Redmine project Identifier and subversion repository URL contains the same word.

i.e.: We have Redmine project Identifier sharaga and repository URL in this project: "

<http://svn.elgama.lt/svn/saugykla/software/sharaga>".

If I create a new project with another Identifier ("aaa") with the same as above svn URL, then "View differences" works fine.

The same problem in #1275

Fixed in r1446.

related_issues

relates,Closed,1275,View differences for individual file of a changeset fails if the repository URL doesn't point to the repository root
