**説明**

This is a bit of a security risk, but if errors occur when redmine (such as detailed <http://www.redmine.org/wiki/1/FAQ#13> where svn isn't in the PATH), then the HTML page displayed to the user contains a nice red box which displays the command it tried, which lists the username and password it tried to access the repository with. Surely the username/password should be hidden and never shown to an end user, even if an error occurred.

journals

Appologies for the messed-up link, Redmine doesn't appear to like formatting http links containing hashes.

I set target version for 0.7.2 since it's a real security concern.

Fixed in r1493. Username and password are now replaced with xxxx.
