**説明**

I just set up Redmine.pm for svn authentication and noticed a lot of log entries like this:

```
DBI::db=HASH(0x860ea88)->disconnect invalidates 1 active statement handle (either destroy statement handles or call finish on them before disconnecting) at /opt/code/redmine/extra/svn/Redmine.pm line 155.
```

Adding \$sth->finish() fixes this and authentication is still working correctly.

journals

Applied in r1539. Thanks.
