説明

Links generated by the wiki are invalid when they contain something that could be an email. For example, this :

<http://foo@www.bar.com>

is transformed to

www.foo@bar.com />http:// www.foo@bar.com

and rendered as this <http://foo@www.bar.com> in a web browser.

I observed this problem by using @hg fetch@ that generates commit messages like :

Automated merge with <https://login@hg.foo.com/project>.

Here is a patch that solves the problem and a unit test. The code come from <http://dev.rubyonrails.org/changeset/7516>. The only limitation of this solution is in that case :

<http://foo@bar.comfoo@bar.com>

where only the first link is detected. I did not found the magic regexp. Maybe this could be solved with some lookbehind but the syntax is not supported on ruby 1.8.

journals

Fix committed in r1559. Thanks.
