This patch will link user email addresses in the User Administration list (e.g. http://your-redmine-url.com/users).  Email addresses are encoded by JavaScrpt so they cannot be crawled.

### journals

Javascript encoding could be applied in account/show but I'm not sure that's worth on the user administration screen. You'd be in trouble if your admin pages are crawled. A simple mail_to should be OK.

## WDYT ?

But I *really* wanted to try out the @mail_to@ helper.  A basic mailto would be fine.

## mailto link added on administration user list in r1687.
