According to RFC2606, Reserved domain names such as "example.com", "example.net", "example.org" are preferable to "somenet.foo" which is used as Redmine administrator's default email address and Emission email address.

ftp://ftp.rfc-editor.org/in-notes/rfc2606.txt

journals

example.com, .net, and .org are *not* reserved domain names. RFC 2606 clearly states the following are reserved:

- .test
- .example
- .invalid
- .localhost

Regardless, this request is pedantic, a non-issue, and a waste of time imo.

Thanks for your comment to my opinion.

RFC 2606 chapter 3 saids that these domains are also reserved.

> Regardless, this request is pedantic, a non-issue, and a waste of time imo.

I don't think so. Popular product would better to be educational.

Fixed in r1764. Default configuration now uses example.net.

Thanks!
