<b>説明</b>			
<p>In some cases an administrator wants to track who is downloading from the svn. Using Redmine.pm that is easy, but only when the project is not public.</p> <p>What I need is that users who are not a member of a public project, still need to authenticate when logging into svn, meaning they need to register at the redmine project page.</p> <p>So in Redmine.pm it needs to check if a project is public, but still needs svn auth access.</p> <p>I'm not a perl programmer, so I could not change it.</p> <p>Changes needed:</p> <ul style="list-style-type: none"> <li>• Redmine.pm should check if project is public, but not open for anonymous access</li> <li>• Redmine project settings need 'no anon access' switch</li> </ul>			
journals			
+1 to the features request. :P			
<p>sander you can comment a line of code in redmine.pm to get basically what you want.</p> <p>Where the redmine check if the project is public, let it ignore the flag.</p> <p>I hope it helps.</p>

<p>Where the redmine check if the project is public, let it ignore the flag.</p>			
<p>The idea is nice, however omitting that flag makes Redmine.pm want the user to be a member of the project. And since members won't be that by default, it's still a problem.</p>			
Apache option will be ok?			
<p>Something like RedminePublicProjectAnonAccess true false?</p>			
<p>Yeah, that might work. Unless you work with a parent SVN path, in case it won't work.</p>			
+1 :) Another suggestion for this feature would be to allow public & anon reads and writes to svn and to redmine separately.			
Thanks Overmind. Commenting out lines 208 & 209 worked for me.			

```
$r->set_handlers(PerlAuthenHandler => [&OK])
```

```
if is_public_project($project_id, $r);
```
