<b>説明</b>			
<p>It is not uncommon for Windows AD servers to allow spaces in the user name (sAMAccountName) but currently redmine does not allow the user name to contain 1 or more spaces which means that when using LDAP to authenticate, it is not possible to use sAMAccountName to lookup users.</p> <p>If there is not a technical reason for this limitation, would suggest the the regex scan for the user name allow spaces in the middle of user names, but not at the start or end.</p> <p>See patch #811 supporting this change.</p>			
journals			
any plans for it ?			
<hr/> <p>It's more an Issue. AD usernames with space cannot authenticate with Active Directory.</p> <p>Confirmed on Redmine 2.0.1</p> <p>Best regards,</p> <p>+1</p>
