説明

The link to a changeset, which updated a ticket status, in ticket comments is shown to users, even if they dont have the credentials to view the changeset.

So the user gets a "you're not allowed to access this" error page on accidently clicking on the link.

journals

I think it's a much more general issue : nearly wherever you are in Redmine, there can be links you can't follow if you do not have the "View" permission on the section/module. It might be difficult to do this without coupling links parsing and permissions... Any thought about that ?
