**説明**

For simple dependencies, instead of creating tasks for every little thing, we "pass the baton" by changing the assignee. This works well, but there could be a problem:

Alice opens the issue and assigns it to Bob.

Bob needs information from Carol and reassigns the issue to her. Bob forgets to add himself to the watchers.

Carol replies but forgets to assign the issue back to Bob. Bob is not the originator, the assignee, or a watcher, and is not notified.

journals

You can use the plugin i made to do that if you want.

Thank you!

+1

I love this feature. For me, it seems mandatory to define the assignee as a watcher per default. Then, if the assignee wants, he can change the watcher status.

Would it be possible to integrate it in the next release (v0.9 ?)

Hi Teddy,

I wanted to try your plugin on v0.8.1. I have copied the folder redmine\_auto\_watch in the vendor/plugins folder, ran rake db:migrate\_plugins and restart my server.

I can see your plugin in the administration plugin list.

But, when I assign a issue to user1, it is not automatically added as a watcher.

So, your plugin does not work for me. Do you know if it comes from the redmine version used, or if I missed something ?

Jerome Vanthournout wrote:

...

Hi,

I just tried with 0.8.1 and it's still working.

The @test1@ user should not be the author of your test issue (author always receive notifications), and check your @View watchers list@ rights.

And for info, rake db:migrate\_plugins is not needed because i didn't make db modifications.

Hi Teddy,

Ok, it works now.

Thanks for your plug-in which should be integrated in the trunk version.

---

There is one issue with plugin - when assigne\_to is nil

Simple fix follows

I don't seem to be able to link tickets.

See also #1737

Hi,

Do you think when a user not in the watchers list updates the issue, should him/her be added to the watchers list automatically?

Sometimes I when I gives feedback to an issue that I am not part of, I might forget to add the issue to my watch list. But I think most of the time the user would like to watch the issue by default if he joins the discussion.

Thanks,  
Michael

---

Is it compactible with Redmine 2.x ?

Try it out: [https://github.com/logical-and/redmine\\_auto\\_watch](https://github.com/logical-and/redmine_auto_watch). Watchers added on issue update and issue create from: author, assignee, previous assignee if any.

Would it be difficult to extend this to be on creation per project? That is, any issue created in a certain project gets default watchers?

When you create issues by sending an email to an address and then reading the email with rake redmine:email:receive\_imap

the issue is created but the creator (email sender) it is not marked as watcher. Could the plugin be modified to support this feature? Is there any hook to handle when you create with receive\_imap rake task?

+1

+1

+1 this would be really important!

I can confirm that the forked and enhanced version of this plugin which can be found at [https://github.com/mephi-ut/redmine\\_auto\\_watch](https://github.com/mephi-ut/redmine_auto_watch) works very well for Redmine 3.3.1

---

hi guys!

can someone confirm that this plugin is compatible with redmine > 4.0.0?

we have been using Teddy L's Version so far successfully with up to 3.4.6 - thanks Teddy L by the way.

Kind Regards,

**Matt**

Hi, i have forked this plugin on Github and fixed Redmine 4 compatibility:

[https://github.com/PewPewMeowMeow/redmine\\_auto\\_watch](https://github.com/PewPewMeowMeow/redmine_auto_watch)

Have Fun

Kai

PS: all hail Teddy L :)

It doesn't work with version 4.0.4.stable

If you try make new issue, and assign user - it will crash.

In logs:

```
Parameters: {"utf8"=>" ", "authenticity_token"=>"Vc04yOzbC6cPGkIEN5cotxnXkx7i3qRd+X9VcysTcrk3JtDb6ommmPRqUIBH13E2AAHqGQGCcfyGd9QICl0sOgQ==", "form_update_triggered_by"=>"", "issue"=>{"is_private"=>"0", "tracker_id"=>"8", "subject"=>"TEST", "description"=>"", "status_id"=>"6", "priority_id"=>"2", "assigned_to_id"=>"777", "fixed_version_id"=>"", "parent_issue_id"=>"", "start_date"=>"2019-08-28", "due_date"=>"", "estimated_hours"=>"", "done_ratio"=>"0", "custom_field_values"=>{"79"=>"", "13"=>"", "62"=>"", "83"=>"", "84"=>"", "watcher_user_ids"=>["", "4", "927"]}, "commit"=>"Make", "project_id"=>"utm-level3-ckp-okp"}
```

I think, trouble in this watcher\_user\_ids"=>["", "4", "927"]

end
```

## to exclude adding author to watchers

hello lucky boy and Anton Koptsev!

Thanks for your input. Anton still has not acknowledged Lukes PullRequest [1] on github and I think this is a good thing. Because the creator of the issue is not added anymore. This is, however, wanted. I still dont know what the actual problem is. Errormessage is "Watchers is invalid" although I dont see any errors in the log? Overmore the errormessage has no meaning - issue is still created and watchers are correctly set - still works if that issue gets a new owner - plugin works flawlessly except for that misleading error message.

Kind Regards,  
Matt

PS: would still be great if that feature would be moved into redmine itself

Hello!

Today I check this plugin (with correction by Lucky Boy). Now all work perfect. Thank you!

---

hello!  
have you tried adding a new issue and then check if you are subscribed to it? For me that wasnt the case. Lucky Boys request just omits that the creator is added to watchers which is bad.

I have the correct change: change issue.assigned\_to to issue.assigned\_to\_id - this solved the problem for me. can you please recheck the behaviour i described - I was about to send you the correct pull request.

Kind Regards,

Matt

Your pull request solved my problem. Thank you!

hi anton!

great to hear. if you are satisfied with the change can you please dismiss lucky boys PR and accept mine? so that your master holds the correct change.

thank you guys

I made a patch on top of #4347 (which is now committed) to add this option to the auto watch options.

I think we can deliver this in version:"5.0.0".
