説明

Some months ago, before the great restful reorganization patch (#1901), I created a small feature called project tinyurl. This is a supersimple action that provides an unique permalink to a project path and redirects any request to the real project URL.

Example:

<http://www.redmine.org/redmine> => <http://www.redmine.org/projects/show/redmine>
<http://www.redmine.org/foobar> => <http://www.redmine.org/projects/show/foobar>

Here's a couple of real world examples:

<http://code.simonecarletti.com/www-delicious>
<http://code.simonecarletti.com/apachelogregex>

I forked Eric's repos on GitHub and provided a full patch along with functional and integration tests.

<http://github.com/weppos/redmine>

All changes are available in a separate branch called @tinuyr!@ (ehm... I misspelled it on creation!).
