As of Redmine 0.8.0.stable.1655, there is no way I can find to give a title to links other than wiki links (using [[...|title]]) and external http: links (using

"title":http://...

). This means it's impossible to, say, title a source: link or an email address.

It'd be nice to be able to title these links too. It doesn't really matter how--either "title":... or [[...|title]], or some other way.

journals

If this is meant to be in wiki text - the work of this is already done.

If this is related to custom field this is related to another related issue - #5794. #2792 and #5794 are almost duplicates.

I'm sorry for asking . But in the latest version of RM, is it possible to reender custom field in URL to value. For instance, i have custom field %issue_custom_field_values_13% but when URL is reendered, i don't get actual value from that field in URL.

Are these only options to do that:

```
Link  values  to  URL:  creates  a  URL  using  the  following  variables.
      %value%  =>  the  custom  field  value
      %id%  =>  id  of  the  customized  object
      %project_id%  =>  id  of  the  project  of  the  customized  object  if  defined
      %project_identifier%  =>  identifier  of  the  project  of  the  customized  object  if  defined
      %m1%,  %m2%...  =>  capture  groups  matches  of  the  custom  field  regexp  if  defined
```

Thanks
