When filtering tickets 'text' fields, I mean builtin 'text' fields like 'title' AND also 'text' custom fields, you can choose between :

- 'is'
- 'contains'
- 'is not'
- 'doesn't contain'

It will be nice if you add new choices :

- 'regex' (this one should be very very useful)
- 'is empty'
- 'is not empty'

journals

Is there a workaround to filter a text field with a criteria 'is empty' or 'is not empty' ?

"is not" and "does not contain" could be better solved with a general "not" operator, that could added to every operator no matter the data type...

Browsing sources, I found a workaround : Countains '_'

In SQL, it becomes :

... LIKE %_%...

which means "contains something".

+1. This is very useful.
