Reminder sends emails for issues due. It's also be useful to send emails at start. It can be used in future tasks planing.

How can I modify this to send reminders also when something has not been worked on? I do not know how often we will use due dates, when we have priorities which dictate urgency of tickets.

- immidiate priority -> send reminder if no one updated issue within 12 hours of last update
- critical priority -> send reminder if no one updated issue within 24 hours of last update
- high priority -> send reminder if no one updated issue within 48 hours of last update
- normal priority -> send reminder if no one updated issue within 7 days of last update

---

Is there something I can help with to test and/or develop this issue? It would be great for tasks and event planning in our project, which is not only code related.

What also would be interesting is to specify any data field to be used. So that you could use for example a custom field instead of the start-date or the due-date.

+1 It is not enough reminders about starting and ending task!

Please Add this feature. The plugins are not cutting it because they aren't maintained. I mostly need the email Watchers feature, personally.
