**説明**

Add the ability to link to a custom query from the wiki (and other wiki like fields)

h2. Syntax

query:[query id]

h2. Behaviour

- Displays a link to a custom query
- Text of the link should be the query title

h2. To be confirmed

- I'm not sure what the appropriate behaviour is if query is not public

journals

Please take a look at <http://www.redmine.org/boards/2/topics/2742> also, which suggests parametrized custom queries. Maybe the syntax could be something like

query:[query id]:[parameter]

+1

see also <http://www.r-labs.org/issues/828>

Strange that this wasn't handled :-). I would like the feature too!
