説明

On some pages, like Home or My page, the project menu is empty but the div html is still present.

It's a problem when you a background image in CSS, because you see the background image without the menu items (see the screenshot).

Could you remove:

or add a CSS class to identify an empty menu ?

Thank you very much.

journals

Fixed by:

- Saving for the result of render_main_menu into menu_html
- Adding a class "empty" on main_menu if menu_html.nil?

The attached patch should resolve this issue.

JPLang, pushing this up on your radar. The patch seems ok, though I'm not sure this kind of logic should be in a view, I don't have a better idea at the moment though.

I agree. I've committed a different version of it which will not display the main-menu div if it's empty ("commit"):

<http://github.com/edavis10/redmine/commit/7514e12d331bea026155df6cdc2b68df8b77d7b1> r3539)
