説明 We had some issues with bazaar and missing revisions in redmine. Problem came down too how the bazaar_adapter.rb parsed the "revno: " Redmine could not parse "revno: 65 [merge]", but parsed "revno: 64" just fine. We believe the [merge] tag shouldn't be there at all, but this comes down how we do our releasing with bazaar, but redmine should handle that in either case. Our "bzd log --show-ids -r64..65" ; revno: 65 [merge] revision-id: daniel_magnusson_-20090519142057-gv85uugmmcmymr3f4 parent: fakemail@gmail.com-20090519065534-vrlvyjm6qoukkm392 parent: daniel_magnusson_-20090519141858-s0hjrwsks45dxhcv committer: Daniel Magnusson <> <> branch nick: dev timestamp: Tue 2009-05-19 16:20:57 +0200 message: Initial FakeComponent integration revno: 64 revision-id: fakemail@gmail.com-20090519065534-vrlvyjm6qoukkm392 parent: fakemail@gmail.com-20090518152627-3bnipq8iu0sktdz4 committer: BjornLu fakemail@gmail.com branch nick: mybranch timestamp: Tue 2009-05-19 08:55:34 +0200 message: restore a temp fix, regarding login problem We use Bazaar (bzd) 1.15 Python interpreter: /usr/bin/python 2.5.2 Python standard library: /usr/lib/python2.5 bzrlib: /usr/lib/python2.5/site-packages/bzrlib Bazaar configuration: /home/danielm/.bazaar Bazaar log file: /home/danielm/.bzd.log And Stable release from Redmine , 2009-xx-xx v0.8.5 with rails 2.1.2 Our fix for this issue was in bazaar_adapter.rb(line 92-ish);			

```
if line =~ /revno: ( /d+)$/
revision.identifier = $1.to_i
#added fix;
elsif line =~ /revno: ( /d+) /s+( /S+)$/

revision.identifier = $1.to_i
```

Could probably do this on one row, some regexp expert should look into it.

journals

Hello

We also came across this issue when using bazaar. We altered the existing RegEx to detect '[merge]' at the end of the revno: line, as show in the attached diff. It's exactly the same, but less redundant code, cleaner to read etc.

Nice patch, a question, do you have problems with "Autofetch commits" when you click inside redmine->repository as well? (it doesn't fetch the latest revisions from bazaar). I believe there is some other "bazaar fetch code" somewhere in redmine that doesn't properly work, but I'm just guessing here.

We haven't found a solution for it and are just doing the "ruby script/runner "Repository.fetch_changesets" -e production" as a cronjob for now.

The autofetch is working for us fine, but I am using a checkout of trunk at the time of setup as apposed to a stable release. It may have been fixed I guess.

We're using the mirrored branch of trunk on launchpad, rev 2244

Patch applied in r2780. Thanks.
