There are 15+ managers in our Redmine who got "Create project" permissions.

Last week we found out there are some duplicate projects, tried to find out who created the project. Right now there is no way other than going through the Log file...

It will be nice to have columns "user_id" & "created_on" in tables like

- projects
- documents
- custom_fields

This will help to find who added a particular entry in RedMine.

Any thoughts?

Thanks,
Nanda

journals

"Category" for this feature should be "Database"

+1

+1

+1 for "created_by" field

+1.

It should be 'created_by' (aka 'author') and 'created_on' fields.

It should also be for Versions.
