説明 Is it possible to place downloadable files on a remote host. Host A run redmine, and Host B with more bandwidth and disk space holds files. The files could be always store on A and sync with B. With this option, the Url of downloadable files would be modified			
journals +1. Good to have feature. I wondering since there is a plugin like "Redrop":http://www.redmine.org/plugins/reddrop , "Dropbox Attachment Storage": http://www.redmine.org/plugins/redmine_dropbox_attachments and "Redmine S3": http://www.redmine.org/plugins/redmine_s3 - that means, the above stated should be easily solvable by a plugin, yet there is no direct plugin which allows me put on any standard HTTP or FTP/SFTP server. :(
