<b>説明</b>			
<p>Hi,</p> <p>i'd love to export docbook straight from the wiki, then i could create a docbook ref file somewhere and include via url some selected wiki pages in my wiki.</p> <p>Thanks !</p>			
<p>journals</p> <h2>Any news on this? Maybe plugin is available?</h2> <p>There is a gem @redcloth-formatters-docbook@ which can do some basic conversion from textile to docbook. Safe the TODO's which are easy enough to add conversion works quite nice. So I thought I share this little program and maybe someone can integrate something in Redmine.</p> <pre># Convert textile formatted files to docbook #  require 'optparse' require 'fileutils' require 'rubygems' require 'RedCloth' require 'redcloth-formatters-docbook'  revision = "0.9 - 2012-08-29"  # CHANGELOG # 0.9      initial version  # Program options @options = {}  optparse = OptionParser.new do opts    # Set a banner, displayed at the top   # of the help screen.   opts.banner = "Usage: tex2doc.rb [optionen] datei ..."</pre> <pre># Define the options, and what they do opts.on( '-v', '--version', 'Print version' ) do   puts "tex2doc " + revision</pre>			

```
end

# This displays the help screen, all programs are
# assumed to have this option.
opts.on( '-h', '--help', 'This message' ) do
  puts opts
  exit
end
end

# Parse the command-line. Remember there are two forms
# of the parse method. The 'parse' method simply parses
# ARGV, while the 'parse!' method parses ARGV and removes
# any options found there, as well as any parameters for
# the options. What's left is the list of files to resize.
optparse.parse!

puts "Tex2Doc Version #{revision}, Help: -h, --help" unless ARGV.size > 0

# TODO replace

by
# TODO search empty table cells ||, fill with a single blank should do
# TODO escape <, >, &

ARGV.each do |file|
  textile = File.open(file, 'rb') { |f| f.read }
  docbook = RedCloth.new(textile).to_docbook
  File.open(file + '.xml', "w") { |f| f.write docbook }
end
```
