説明

Currently, you can only set the status field when you reply at a ticket using e-mail. This patch adds the possibility to change the priority, category, tracker, target version, done ratio, project and custom fields, with respecting the allow_override setting.

You can delete the target version field with setting it to 'none'. The target version is named Target and the done ratio is named Done.

Example mail:

Here your comment

Target: 0.9
Done: 50
Tracker: Defect
Priority: Low

Diff is made against 0.8.6, but should work for trunk too.

journals

Some of these have already been implemented in trunk so the patch will fail to apply. If someone can clean up this patch for trunk and add some unit tests, I can apply it (see test/unit/mail_handler_test.rb for examples).

The only difference between trunk and the 0.8 branch is that the function is renamed from receive_issue_update to receive_issue_reply. Anyway, I've created a working patch for trunk.

I will write tests later.

All attributes can now be changed (r4394). But clearing attributes with 'none' is not yet implemented.
