説明

We are restricted to using clearcase as primary version control system. It would be great if Redmine had basic ClearCase support. Further informations:

- <http://www-01.ibm.com/software/awdtools/clearcase/>
- http://publib.boulder.ibm.com/infocenter/cchelp/v7r0m0/index.jsp?topic=/com.ibm.rational.clearcase.hlp.doc/cc_main/c_ho_od_cleartool_cli.htm

journals

This is not going to happen, unless you find a developer who is willing to

buy the product

create a patch for supporting it in redmine

support this patch in the future.

As this is a closed source commercial SCM, this is rather unlikely, unless you step in yourself.

This would be helpful for the project I work on... Greatly. I think there would be a large user base who would appreciate this feature on their projects to help give ClearCase a shot in the arm... so to say.

+1 again.. We trailed redmine for about 6 months and wen back to clearquest due to a lack of integration with clearcase, specifically source code traceability to bug reports. Help!

I'd be willing to give the development of this a shot if anyone could point me in the right direction to start..
