説明			
journals			
There are two interim so	lutions		
1) you can create custom	n fields into names		
2) you can type in first+second (patronymic) into the 'firstname' field. Case in point: I did that with my second name.			
Typically proper internat	ional name handling quickly becomes a i	mess. Here is a post or	Dutch names:

That's what I'm doing now, but it leads to a unnatural name format.

Head to Administration -> Settings -> General -> User display format. There you should be able to setup how the combination of firstname/lastname should be displayed. Maybe this way you can tweak it to display it more naturally?

Kind regards

Adam Piotr ochowski
