説明

This issue is extracted from #3100 and it's relatives. The patch adds a new system-wide, issue-tracking setting (@hide_prefixed_projectname_from_issuesubject_on_issuelist@) which provides the administrator an option to hide the subproject name (which is prefixed in front of the issue descriptions on mainproject issue lists) completely. Such a setting can be useful if the site is configured to display the @project@-column be default.

The default setting is equal to as it is currently(the projectnames are shown prefixed to the descriptions).

journals

Oops, forgot to actually attach the patch...

edit: also added some relations

What about fully removing the project name from the issue subject ? since the project can now be added as column.

Good idea. I see you've removed the project name prefixed to the issue subject already in r3112.

Maybe it's best to also enable the project column as a default issue-list column in the default configuration (source:/trunk/config/settings.yml#L127)?

This patch can be closed without further changes as being obsoleted by changes in the core, when the project column is displayed on issue-lists by default IMHO.

Jean-Philippe, What do you think of this? Now that the project name prefixes on issue-subjects on the issue-list are removed and without the project-column not activated by default on issue-lists, the situation can occur that a user interprets the issue-list as being for the current project only.

In my opinion such should be avoided if possible... ;)

I need to make my statement clearly more obvious. Here it comes: "Now that the projectname-prefixes on issue-subjects on all the issue-lists are removed and without the project-column not activated by default on project issue-lists and with the setting 'Display subprojects issues on main projects by default' set to @TRUE@, the situation can occur that a user interprets the project issue-list as being for the current project only while it also includes issues of the projects' sub-projects (and their sub-projects, I guess...)"

For the above I'd suggest to enable the project column as a default issue-list column in the default configuration (source:/trunk/config/settings.yml#L127).

Note: The patch could be considered obsolete.
