説明

Hello we have been using Redmine for a couple of months now and just realized that if the subject has letters in uppercase, then doing a search with that word fails to show up in Redmine.

Any ideas why or if there's a fix/workaround?

This is very annoying.

journals

Upon further testing I believe its not the case of the letters but the number of letter put in the search box. Redmine will not search for two letter words.

Words shorter than 3 characters are excluded from search:

source:/trunk/app/controllers/search_controller.rb@3039#L65

+1

We use lot of 2 characters abbreviations and cannot search for them because of this limitation.

Would be great to decrease the excluded length to 1 char (or even remove this limitation).

We are in the same situation as David, can't search for 2 characters abbreviated words.

Fixed in r3306.

Merged in 0.9-stable in r3317.
