If the Autocomplete methods are moved to a common AutocompleteController, it would be easier to share them with different parts of Redmine. This would make adding things like an issue autocomplete for the Issue Relations trivial.

journals

+1 as it relates to #4325, and all the other wonderful possibilities that could come of it!

Started on this in r3945 with the issues autocomplete.

I am stepping down from working on Redmine. If someone else is interesting in working on this issue, feel free to reassign it to them.

Eric Davis

1.1 feature freeze.

I don't think there should be an autocomplete dedicated controller with methods concerning issues, others categories, users, etc.

I think these autocomplete methods shoud stay in issue_controller, etc. and may use an autocomplete helper tightly linked to the application_helper.

Hi,

any news on this older ticket? Any decision made?
