説明

It would be really useful if we could export the documentation we create under the Documents section to a PDF. I tend to create a lot of content under that section, and the wiki section, and it would be helpful if I could provide that to users easily that I don't necessarily want to grant project-access to.

journals

Note that this is similar to #3463

Would be nice if there even would be the possibility to make ONE PDF from a category of documents

PDF export for Wiki is really useful, but I still believe that "Documents" should also have PDF export button.

Please, why this is available in "Wiki", but not "Document", where document is more likely to be documentation, etc.

+1 :)

+1, I would also appreciate this feature.
