Hello,

I am sorry for bothering you again, this time (I know) with the stupid request.

I am just arguing with a few of my colleagues which theme is the best one. Well, we were not to find the same opinion to this matter.

Would it be possible to have the theme setting at the user account, say if blank then the system wide theme applies, otherwise, the user specific is used?

Thank you & best regards,

Jiri.

workaround

Use Plugin
https://github.com/haru/redmine_theme_changer
https://github.com/seyedmmousavi/redmine_user_specific_theme

journals

any luck with this?

No reaction from the Redmine development team at all...

For those falling on this issue, you can simply add this plugin :

http://www.redmine.org/plugins/themechanger

IMHO this should be in trunk...

Done.

+1. This is a nice thing to have.

I have created a JavaScript theme loader to do this.
https://github.com/sdiemer/redmine-multi-theme

The theme selected by the user is stored in his cookies.
At each page loading, the theme loader get the value stored in cookies and add the required CSS file.

The themes in the list have been created automatically with a script I wrote.

PS: I didn't test it on IE, because I hate IE and no one in my company uses it, but it should work too.

Yet another plugin for user specific theme:
https://github.com/Undev/redmine_user_specific_theme

* For me the issue is resolved.

+1

+1 we don't want plugins for this, this functionality is *really* basic.

Re-opening, closed the wrong issue...

I agree with Victor Berke that "we don't want plugins for this, this functionality is really basic".

This feature would be extremely useful. In our company, we have several different large areas using the same Redmine server, and many users have different preferences for viewing the demands.

Are there any plans this functionality get into some version of Redmine?

+ 1 for this. Really basic feature.

Hi, it's six years ago opened, it is complicated to do this or nobody from developers is interested?

+1

For what it's worth, if anyone needs, the following plugin is compatible with Redmine 3.3

https://github.com/seyedmmousavi/redmine_user_specific_theme

Thanks, work very well.

Welcome :). Credit goes to the Author. Would be nice if this becomes part of standard Redmine Installation.
