説明

I am interested in using the Gantt chart's PNG output for embedding in a report document.

For this to be useful I need to be able to set the PNGs length in terms of start-date to end-date. This would allow me to do things like:

"Show me a Gantt chart starting from the beginning of the project and ending at the due date of Version X".

The usefulness of this would increase as the REST APIs become more fully fledged and we can start getting more date information from RedMine.
