説明			
This patch allows a plugin to add his actions to existing permissions, on init.rb should be called like this			
<pre>add_permission :view_issues, :issues_plugin => [:index,:list,:show]</pre>			
journals			
forgot brackets on example			
<pre>add_permission :view_issues, { :issues_plugin => [:index,:list,:show] }</pre>			
<p>this is a pretty simple patch, and posted 2 years ago, there's any chance to get it merged?</p> <p>Won't [[Plugin_Tutorial#Extending-the-project-menu]] fit your need?</p> <p>-</p> <p>-</p> <p>-</p> <p>-</p>			
<p>-</p> <p>this patch expands what is explained in plugin tutorial it allows plugins to add methods to a permission. For instance if you write a plugin to add issues from another controller, with this patch you can just call</p> <pre>add_permission :add_issues, { :issues_plugin => [:new,:create] }</pre> <p>instead of adding another permission 'add_issues_2'</p> <p>Please don't randomly assign tickets to people.</p> <p>-</p>			

-

why this patch still wasn't merged?
