説明

Hi everyone!

I need some help with a new custom field. This custom field is a list, but not a fixed list. It should let you add news items just like the field 'Target Version'.

I also need to add a new custom field when I create a new project. Is that possible?

Kind regards,
P.C.

journals

I have the same trouble: a custom fiels i want to add has a type "list". But its content will grow as users work. It`s not comfortable for them to call me every ticket when it needs a new value of that field. And even more unconvinient for me: i should left all my current work to add a short string to that list.

If this problem can be resolved another way, please, note that.
