説明			
<p>time tracking works weird with subtasks. I logged to demo.redmine.org and created 3 tasks in my "ace" project:</p> <p>1) feature1 - no estimate - target release 6.2</p> <p>subtasks for feature1:</p> <p>2) bug1 - estimate 5 hours - target release 6.2 3) task1 - estimate 10 hours - target release 6.2</p> <p>I see total estimated time on 6.2 roadmap is 30 hours. feature1 consists of 2 tasks, which are 15 hours total. and I see the total time of 15 hours shown on "feature1" details page. why is subtasks' time added to the main task's time itself on the roadmap?</p> <p>I'm considering using Redmine for simple project planning and I'm curious if timetracking feature is something experimental or stable enough to be used in production.</p>			
journals			
Confirmed.			
I have been using time-tracking with no problems on 0.9.3.			
If course that doesn't have sub-tasks. This is a new feature that isn't released yet, I think the demo site uses the developmental trunk code.			
The total estimated time for the version is fixed in r3633. It should now be 15.
