説明
Since we have "subtasks" now, it would be better to (optionally) show a tree of issues in the "Roadmap" instead of a list of issues.
Is there an overall design ready how subtasks will affect the user interface in general?

+1 please !
Why this ticket is closed?
It should be opened.

Is there any plan to implement this request?
Are there plugins (compatible with the latest version of redmine) providing this feature?
Cheers

This is in some way related to #7907. IMHO, the ticket list in the Roadmap should be replaced by - or at least made more similar to - the "normal" ticket list.

See here as well --

See http://www.redmine.org/projects/redmine/wiki/HowTo_TreeQuery

+1 current layout nonsensical

I propose to change the order of issues in the roadmap in ascending order of Parent task.

The result of applying the patch:

!{width: 80%; border: 1px solid #ccc}roadmap.png!

before change:

!{width: 50%; border: 1px solid #ccc}before_change.png!

Currently, issues on the Roadmap page are sorted by tracker_id. You can see an example on <https://www.redmine.org/projects/redmine/roadmap>. As a committer of Redmine, the order is convenient. This is the similar order with the `[[Changelog]]`.

But the patch attachment:change_roadmap_issues_to_tree_structure.patch sorts issues by issues.id. I don't like the order.

I applied the patch provided in #5275-19 and found it extremely helpful. It's not clear to me why it would be a desirable behavior to order by issue number; the order in which an issue is created (and thereby receives a number) has no necessary and sufficient bearing on due date nor relationships with other trackers, which seem like defining characteristics of a roadmap.

A cursory google search seems to indicate that this is a highly requested feature, and Mizuki ISHIKAWA's solution seems to work. Thanks very much.

+1

It would be great to have it.
