説明

Member role forms in project settings should be hidden by default.
And we click [edit] button to see them.
But if I add some member to a project, all member role forms are shown.
So I have to click [cancel] button one by one to hide them.

It seems that the behavior was changed after the fix for #4852 (r3483).
Because the load event handler bellow is not called after member added.

```
Event.observe(window, 'load', function() {
  $$('.hol').each(function(el) {
    el.hide();
  });
});
```

journals

I have also had that problem on at least one of my installations. I'll try to go through all of them and post the version numbers.

See patches attached for application.js and _members.rhtml

The name of the function hideRoles could be change if not appropriate.

The other file

Thanks for your cooperation.

The patch works fine.

But I noticed that there still remains some code to be fixed.

So I updated your patch.

But I noticed that there still remains some code to be fixed.

Member role forms are shown not only after member added, but also after member deleted and member role changed.

Updated the patch to reflect the current trunk.

Fixed in r3784. I did it a little differently and had the RJS in the MembersController send @hideOnLoad()@ to the page itself. Thank you for the contribution.

Merged to 0.9-stable for release.
