説明

I have our redmine setup to receive emails to create issues using the "Fetching emails from an IMAP server" instructions at <http://www.redmine.org/wiki/redmine/RedmineReceivingEmails>.

I can successfully attach files to these emails and see them show up, except for emails attached to these files.

I am attaching outlook msg files to a new outlook email message, and sending that to the redmine account.

Should I expect to be able to do this?

Of course, the workaround is to manually attach the email after the issue is created.

journals

+1

For Lotus Notes inline attachment in html mails are not attached to the issue comment although instead of the image i see this in comment

(Embedded image moved to file: pic27267.jpg)
