説明

I upgraded from 0.8.4 to 1.0.1 recently. When switching between inline and s-b-s mode, I get an error, such as:

```
The requested URL /projects/jeenode/repository/diff/Ports/examples/powerdown_demo/powerdown_demo.pde was not found on this server.
```

The problem is caused by /'s being URL-escaped to %2F - when I manually change them back, the URL works as intended. Here's the URL to which Redmine wants to redirect when switching diff mode in the popup:

```
http://[...]/projects/jeenode/repository/diff/Ports%2Fexamples%2Fpowerdown_demo%2Fpowerdown_demo.pde?rev=5969&type=inline
```

(I've edited out the actual server name because it's in a temp location and on a very slow link + machine)

journals

Yes, I also get this error on Centos 5.5.

same as #6292

is it maybe something to do with the escaping for #5548 ?

Same as #6292, we cannot help you until you read [\[\[SubmittingBugs\]\]](#) and provide requested information. Moreover, I'd like to have minimal steps to reproduce, which SCM do you use, in which version, which OS, etc.

About your application's environment

```
Ruby version          1.8.6 (i486-linux)
RubyGems version      1.3.5
Rack version          1.0
Rails version         2.3.5
Active Record version 2.3.5
Active Resource version 2.3.5
Action Mailer version 2.3.5
Active Support version 2.3.5
Edge Rails revision   unknown
Application root      /var/www/railsapp
Environment            development
Database adapter      mysql
```

Database schema version 0

About your Redmine plugins
Markdown formatter 0.0.1

I'm using subversion. To reproduce, here's what I did: took the Redmine turnkey install from <http://www.turnkeylinux.org/redmine> - then upgraded it as described.

I'm having the same problem with latest "Bitnami Redmine stack": <http://bitnami.org/stack/redmine> on a Windows 2003 Server standard edition. I have also recently migrated from 0.9.4 to 1.0.1 using the Bitnami upgrade documentation, and I use a Subversion repository. Here are the versions in Bitnami stack :

- Redmine 1.0.1
- Apache 2.2.14
- ImageMagick 6.5.6-8-Q8
- MySQL 5.0.83
- Subversion 1.6.6
- Ruby 1.8.7-p249-i386-mingw32
- Rails 2.3.5
- RubyGems 1.3.6

The error occurs only when switching between inline and sbs on a single file diff (with the "view differences" combo on top); it's perfectly working when you display the diff of a whole revision. As described on top, the part of the url describing the path in the SCM repository contains %2F instead of /

Same problem for me.

Showing the diff for a file shows automatically sbs-view. Everything works fine.

<https://servername/projects/myproject/repository/versions/1084/diff/trunk/lib/model/messages/Incoming.php>

Switching to inline view (using the dropdown) gives a 404.

<https://servername/projects/myproject/repository/diff/trunk%2Flib%2Fmodel%2Fmessages%2FIncoming.php?rev=1084&type=inline>

My configuration:

```
Ruby version 1.8.7 (x86_64-linux)
RubyGems version 1.3.6
Rack version 1.0
Rails version 2.3.5
Active Record version 2.3.5
Active Resource version 2.3.5
Action Mailer version 2.3.5
Active Support version 2.3.5
Edge Rails revision unknown
Application root /srv/rails/redmine-1.0.1
Environment production
Database adapter mysql
Database schema version 20100819172912
```

The same problem for me...

Inline view, shown by default, works fine. Switching to sbs view gives 404 error.

```
Ruby version 1.8.7 (i686-linux)
RubyGems version 1.3.7
Rack version 1.0
Rails version 2.3.5
Active Record version 2.3.5
Active Resource version 2.3.5
Action Mailer version 2.3.5
Active Support version 2.3.5
```

Edge Rails revision unknown
Application root /opt/rails/redmine-1.0.1
Environment production
Database adapter mysql
Database schema version 20100819172912

svn, version 1.6.12 (r955767)

It seems I'm able to reproduce this behaviour. I'll look into it tomorrow extensively.

Note: besides that nobody else here actually posted a stacktrace, it seems that nothing about the error is written to the Rails log :S

Mischa The Evil wrote:

It's not a Ruby exception. It's an incorrect URL.

It is an incorrect URL indeed, fixed in

<http://github.com/thegcat/redmine/commit/0392b9f2b4847218982d948f5eb1beee21f1b1ba>

@JB: if you'd be so kind :-)

Thanks! Committed in r4100

Fix confirmed. Thank you Felix! :)

Merged into 1.0-stable for release in 1.0.2
