説明			
<p>If source file contains less than 30% of ascii symbols - redmine threats it as binary. It's affected when browsing repository: /projects/PROJECT/repository/entry/FILE (redmine just starts downloading, not showing source file). The problem is that redmine relies on string method http://apidock.com/ruby/String/is_binary_data%3F I understand this is ruby problem, but redmine could do some more checks - at least check for BOM marks.</p> <p>more information here: message#14739</p>			
journals			
<p>I finished implementing until r5211.</p>
